Hi!

I ran some of your codes and they worked, so I am rather confident you tested thoroughly ;)

My hints:

Use Courier New for all code snippets (SAS and Python), all logs and all data (like the HTML returns).

Use consistent indentation/left margin for your code and log paragraphs so they stand out better.

Make your codes look nice. DATA and RUN (or PROC SQL and QUIT) have to be on the same column; if a statement spans several lines, indent those consistently, and put the semicolon on a separate line aligned with the first character of the statement.

You do not have to comment every single aspect of your code; you can safely assume that your audience knows the very basics of SAS, but mention all options/statements/functions/constructs which are rarely used. The less stuff people have to read, the more they can concentrate on what's important.

Add the "registered trademark" character (R in a circle) to at least the first occurrence of "SAS". SAS people are quite sticky about this ;)

Submit your paper ASAP; once it is accepted, you have access to the presenter resources, which includes templates for the paper and presentation.

Regards,
Kurt

Hello Kurt_Bremser,

Thank you again for your willingness to review the manuscript (attached).

I would appreciate receiving your comments.

At this point, I am thinking of submitting a revised of the paper to
<https://www.sesug.org/SESUG2023/academicsections.php#1A>

I'm not sure the paper fits this SESUG session: Statistics, Analytics, and Reporting.

Best regards,

Pradip
